CROATIA

MALA BISAGA

The Croatian Adriatic Coast is a glorious stretch of shoreline that graces the eastern expanse of the Adriatic Sea. The Croatian part of the Adriatic is distinguished by its indented coastline, the most pronounced in the Mediterranean, where karst topography prevails. Here, the land tells tales of geological epochs past, with limestone formations sculpted by time and the elements. The Adriatic's waters caress over 1,300 islands, each a unique jewel, with the Croatian coast claiming the lion's share of these scattered gems. The sea's northern basin is shallow, while the southern reaches plunge into abyssal depths, with the seabed falling away to over 4,000 feet at its deepest point.
